

Investment Objective

The investment objective of the portfolio is to provide moderate capital growth over the medium to long term. The probability of capital loss over the medium term is high. Furthermore, the portfolio will exhibit moderate levels of return volatility. The Portfolio aims to achieve returns in excess of inflation over 3 years and longer. The portfolio will at all times comply with regulations governing retirement funds.

Risk Weighting:

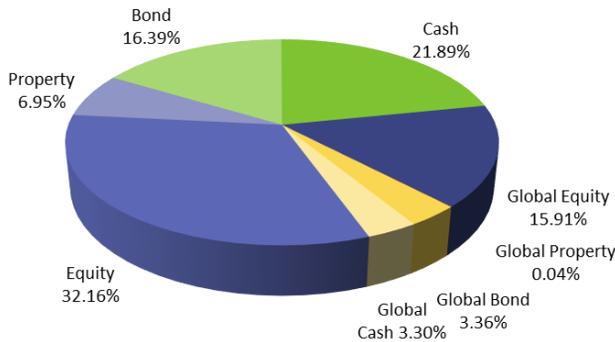

Investment Commentary

On the first trading day in June, the FTSE/JSE All Share Index fell by 0.3%, registering a 10th consecutive losing day and thereby establishing its longest daily losing streak in history. From a closing high of just over 55,188 on 24 April this year, the index is now trading below 52,000. The looming rise in US interest rates, the impasse between Greece and its funders and the slowdown in China have all been offered as reasons for this pullback in the SA equity market. But, simply stated, our equity market has been very expensive for quite a while now and the retreat is in no way unexpected. For the last five years, our equity market has been boosted significantly by a steadily weakening currency. In the five years from June 2010, the FTSE/JSE All Share Index has risen by only 20% when measured in US dollar terms, but when measured in ZAR terms, it is up by 92% over the same period.

A further characteristic of the South African equity market over the last five years has been the divergence in performance between the Industrial and Financial sectors and the Resources sector. An investment of R100 in the Top 25 Industrial sector shares five years ago would now be worth R306 while the same investment in the Resources sector would now only be worth R88 (before investment of any dividends). The Resources sector has been in a bear-market since early in 2011 as it mirrors the bear-market in the Bloomberg Commodity Index over that same period of time. The current strength in the US dollar against all currencies suggests that the commodity bear-market is not about to end any time soon.

These returns underscore again the most important cornerstone of investment strategy: "time in the market" is essential while "timing the market" is risky. Patience will be rewarded as long-established, structural market characteristics re-emerge even though short-term trends may be upsetting. For the month of May the FTSE/JSE All Share Index returned -4.0%, Resources returned -5.2%, and Financials and Industrials giving returns of -5.8% and -2.9% respectively.

This document is not intended to address the personal circumstances of any Financial Services Provider's (FSP's) client nor is it a risk analysis or examination of any client's financial needs. Collective Investment Schemes in Securities ("CIS") are generally medium to long term investments. The value of participatory interests may go down as well as up and past performance is not necessarily a guide to future performance. CIS are traded at ruling prices and can engage in borrowing and scrip lending. Different classes of units apply to this portfolio and are subject to different fees and charges. A schedule of fees and charges is available on request from CI. CI does not provide any guarantee either with respect to the capital or the return of the portfolio. Forward pricing is used. Fluctuations or movements in exchange rates may cause the value of underlying international investments to go up or down. International Investments may include additional risks such as potential constraints on liquidity and repatriation of funds, macroeconomic risk, political risk, foreign exchange risk, tax risk, settlement risk as well as potential limitations on the availability of market information. The portfolio may be closed from time to time in order to manage it more efficiently in accordance with its mandate. A fund of funds is a portfolio that invests in portfolios of collective investment schemes, which levy their own charges, which could result in a higher fee structure for the fund of funds. The PFPS portfolios are portfolios established and administered by CI, and PFPS Asset Management (Pty) Ltd has been appointed to manage and market the portfolios. PFPS is an indirect shareholder of CI. As an indirect shareholder, PFPS may earn dividends from time to time and participation in any dividends may be linked to the revenue generated by CI from the PFPS portfolios, and from any other CI portfolios. CI retains full legal responsibility for this co-named portfolio. Additional information on the portfolio may be obtained, free of charge, directly from CI. CI is an affiliate member of the Association for Savings & Investment SA (ASISA).

Total Expense Ratio (TER): For the period from 1 April 2014 to 31 March 2015 the above TER % indicates the percentage of the average Net Asset Value of the portfolio which was incurred as charges, levies and fees related to the management of the portfolio. The ratio does not include transaction costs. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER's cannot be regarded as an indication of future TER's. Performance quoted is for lump sum investment with income distributions, prior to deduction of applicable taxes, included. NAV to NAV figures have been used. The annualised return is the return of the performance period re-scaled to a period of one year. Performance is calculated for the portfolio and individual investor performance may differ as a result of initial fees, actual investment date, date of reinvestment and dividend withholding tax.
